This is particularly useful on hosts like network appliances that connect to multiple PCI devices, such as PCI Ethernet adapters. Say Y here if you are building a kernel that will be capable of using the PCI-EI PET device. if PCIEP config PETSCH tristate "PET SCSI emulation" Support for PET SCSI emulation. This includes a PCSCII driver and a kernel mode PET SCSI driver. If you say N here, it will not be possible to enable/disable PCSCII support in user space using the psc2 driver. config PCIEP\_PCIEA tristate "PCIeA support" Say Y here if you want to build a PCI device that exposes the I/O region behind the AUI port on the host bridge. config PCIEP\_PCIEB tristate "PCIeB support" I/O region behind the BIO port on the host bridge. config PCIEP\_PCIEC tristate "PCIeC support" I/O region behind the EC slot on the host bridge. config PCIEP\_PCIED tristate "PCIeD support" I/O region behind the D slot on the host 82157476af
